

Description

IRIS diaphragm regulators are specially designed to measure and control the air flow in circular ducts for ventilation and air conditioning.

The IRIS damper consists of a body and a diaphragm made of galvanized steel.

- Available in : - galvanized steel ZnP 275
- stainless steel 316L (except diameter 150 and 300)
- Diameters from 80 to 800 mm.
- Adjusting plastic nut with plastic key.
- Measuring point provided on each side of the iris damper for the connection of a pressure gauge.
- Selection chart giving the air flow depending on the different opening positions of the iris damper, and corresponding pressure levels.
- Double lips gasket for tight connection with the duct.
- Service temperature from -10°C up to +80°C.
- **Airtightness class C according to EN 1751.**

Technical specifications

To obtain a correct accuracy of flow measurement and proper regulation, implementation rules must be followed. Compliance with these guidelines will insure optimal operation of the equipment.

However, IRIS damper operate independently of the air flow direction.

The maximum permissible measurement deviation is $\pm 7\%$. It also applies if the damper is near a T-piece or a duct bend.

Recommended safety distance for typical applications :
